

# Harness the Super Powers of *VisualTrader 7* to Find Profitable Trades – Instantly.

"Saving the world one trader at a time."

# An Important Message for all VisualTrader Owners:

As a VisualTrader owner, you know that VisualTrader provides a unique way to see the market—more specifically, to see MOVEMENT in the market. As VisualTrader has evolved over the past three years, we have added numerous features that have improved it. But all of them were just a "warm up" for VisualTrader 7!

#### FASTER THAN A SPEEDING BULLET

The most important single improvement last year was enhanced processing speed. If you haven't upgraded since VisualTrader 4.0, you simply must see the new VisualTrader in action. It's easily 5 times faster and now can handle a 500 symbol map with ease, even with 4 or 5 timeframes active.

You'll also find VisualTrader now has enhanced Group Signals, Drag and Drop support in the interface—the list goes on. The features added since VT 3.0 are listed on page 10, but that's not why I'm writing.

I want to tell you about the new feature that has turned VisualTrader into a true profit dynamo!

#### MORE POWERFUL THAN A LOCOMOTIVE

It's called Multiple Timeframe Confirmation, or "M.T.C." We added this concept to OmniTrader 2010 through a feature called "EZ-View Setups". With it, you can be alerted to specific indicator setups across multiple timeframes, as described on page 5. As powerful as the Setups feature is, the excitement is around a brand new M.T.C. feature - Leading Indicators in the Focus List.

#### ABLE TO FIND PROFITABLE TRADES IN A SINGLE CLICK!

The Leading Indicator feature redefines VisualTrader's ability to help traders - Real Time AND End-of-Day - find and trade the most profitable and powerful moves. How? By showing you movement in timeframes ahead of and behind the one you are trading. The power of this approach for day traders is obvious. For End-of-Day traders, it's especially powerful.

# The Power of Misc.

**End-of-Day Example** 

The power of VisualTrader 7 is going to be very obvious to any of our customers who are trading in Real Time. All you have to do is look at the examples in this mailer and/or watch my special web presentation (see below). Equally impressive is how much Visualtrader 7 End-of-Day can help our End-of-Day customers be more profitable.

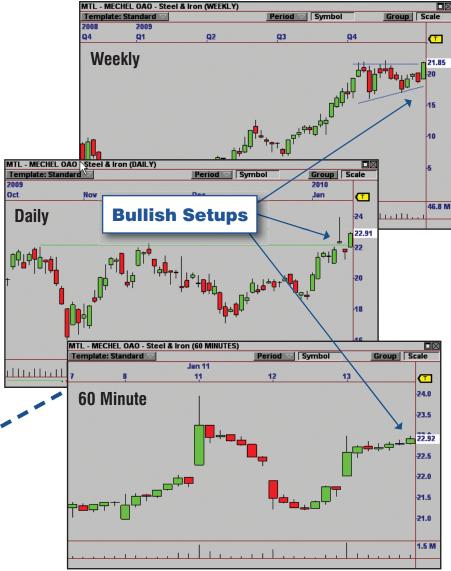

On this page, I am showing 3 charts for MTL—the Weekly, Daily, AND 60 Minute. We see that each of these charts was bullish, based on turns at key technical levels. The resulting move was explosive.

Confirming your charts in multiple timeframes is the most powerful single tool you can use to make money in the markets. Add the OTHER tools in VisualTrader's arsenal—**KA CHING!** 

You may be wondering why we are using the 60 Minute timeframe to trade End-of-Day. To answer this question, take a look at the 60 Minute Chart to the right. On January 13, at the end of the session the symbol had consolidated and was turning up in the last hour (60 minutes) of trading. That was a

(Continued on page 6)

## The VisualTrader 7

### Leading Indicator...

There is no question that Multiple Timeframe Confirmation can help you make more money trading. But VisualTrader 7 goes well beyond showing whether a chart is bullish or bearish in higher and lower timeframes—it shows you HOW QUICKLY sentiment is changing. It does this through an expanded application of the Leading Indicator.

#### What is the Leading Indicator?

If you are somewhat familiar with how VisualTrader operates, you know that the cylinders in VisualTrader are based on Measurements, like Trend, Change in Trend, Volatility Breakout, etc. The VisualTrader Map and List are designed to concurrently show up to 5 Measurements in the Map and List.

The Leading Indicator was created as a way to see two related measurements in one intuitive picture. It displays a thin line, a thick line, and a color band. The thin line represents the value of the primary, or "Trend" measurement. The thick line represents the end of the secondary or "Change" measurement.

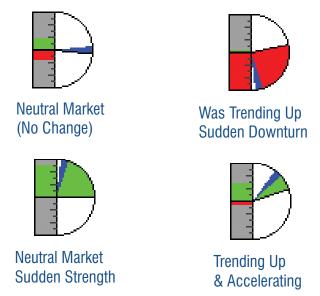

GREEN arcs show a market that has been trending down and is suddenly changing direction to the upside. The opposite for RED arcs. Small arcs show reinforced or renewed movement in the primary trend direction.

The classic Leading Indicator represents an average value of Trend and Change in Trend across the entire map. When the Leading Indicator goes strongly positive, we know the market is moving to the upside.\*

But what about individual symbols in the map? What if we could see the same thing for each symbol in our list—in multiple timeframes?

#### **How the Leading Indicator Shows Current Market Mode:**

<sup>\*</sup> The COLORS in VisualTrader can be changed to any color other than RED and GREEN.

### The Most Powerful Way to See Multiple Timeframe Confirmation Ever Invented!

## How We Added M.T.C. to VisualTrader 7

Now that we've discussed the Leading Indicator and how it works, imagine drawing it as a horizontal strip with two lines and a colored band instead of vertical with two lines and colored arc.

Converting to a horizontal format

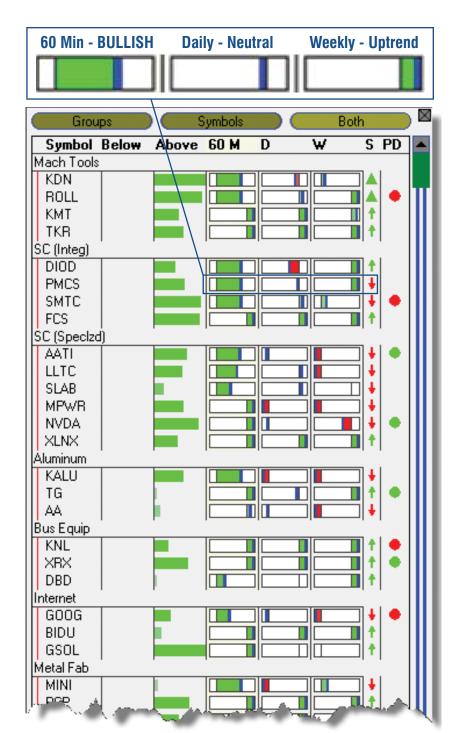

Now, imagine doing this for every symbol based on the two measurements (like Trend and Change in Trend) AND adding additional columns to represent additional timeframes.

The display to the right shows both the original measurement columns (Above, Below, etc.) and the new Leading Indicator columns.

At first, it looks like a lot of information. But when you think about engaging the market, you now have one row of information with everything you want to see. A symbol with a set of solid green elements represents a highly confirmed trading candidate—just one click gets you there!

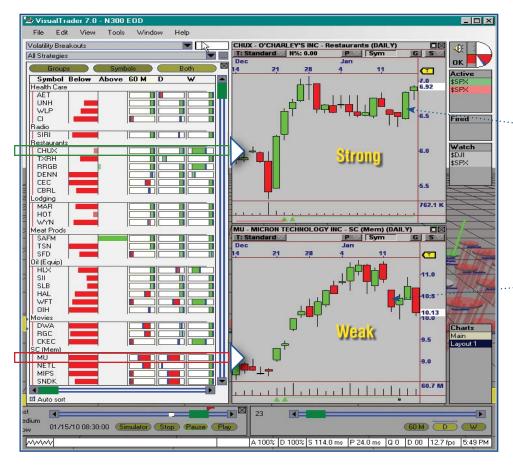

But we're not finished yet, because we haven't talked about the **Indicator Setups** column—the OTHER powerful M.T.C. tool in VisualTrader 7!

(Continued on page 7)

On March 1, 2010 we had several outstanding candidates identified in our upper list. One of them was **PMCS**, with very bullish movement in the 60 Minute chart, neutral in the Daily chart, and up-trending in the Weekly. It gained 10% in the next week.

### **End-of-Day Trading with VisualTrader 7**

It's difficult to find good Buy and Sell candidates on the same day! However, on Jan. 14, 2010 we made money both ways by using Leading Indicators in the Focus List. We also note that most of the List was red. The amount of color in the list is a good indication of future direction for the market as a whole. From Jan.18 to Jan. 22, the S&P 500 lost 160 points.

## The Power of M.T.C.

(Continued from page 3)

sure sign that strength had entered the stock just before the closing bell. Many investment advisors will tell you not to "time the market." But by seeing INSIDE the end of the day you often can, because end of session strength or weakness often carries through into the next session.

Have you ever made a good End-of-Day selection but your stock went the wrong way on the first day? It makes sense to improve our timing if we can, and that's what intraday data (the 60 Minute Bars) provides.

Going back to our example on page 3, a Market

Buy order on MTL would have resulted in a move of over 10% in the next 3 days. There are two more examples on this page, identified by examining strength and weakness in the Weekly, Daily, and 60 Minute timeframes using the Leading Indicator columns.

#### Discover it for yourself

Let me be clear that you don't NEED intraday charts to do well in End-of-Day trading, but it's important to understand the advantage they provide. New users can get a free trial to our Real Time Data, so you can easily see how powerful this concept is for yourself!

#### **End-of-Day Traders!**

Would you pay an extra \$30 a month if you could increase your profits by Hundreds or Thousands of dollars?

Find out how much Real Time Data can help in your End-of-Day Trading – FREE! Our **Real Time Data** service costs just \$59 per month plus exchange fees – just \$30 more than End-of-Day Data and Scans.

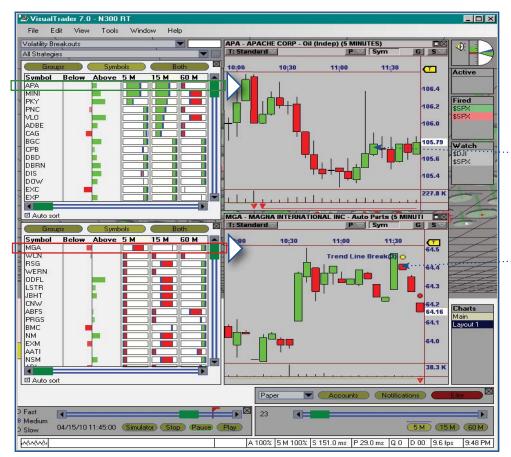

A FREE TRIAL to OmniData Real-Time is included for new users with your End-of-Day Upgrade to VisualTrader 7.

### **Trading in Real Time**

Here is an example in Real Time using the 5 Minute, 15 Minute and 60 Minute timeframes. In this case, we followed what happened on the chart at the top of each list, sorted on the Leading Indicator column for 5 minutes. As we would hope, APA went up on strength, and MGA went down, gaining about 60 cents between them.

#### How We Added M.T.C. to VisualTrader 7

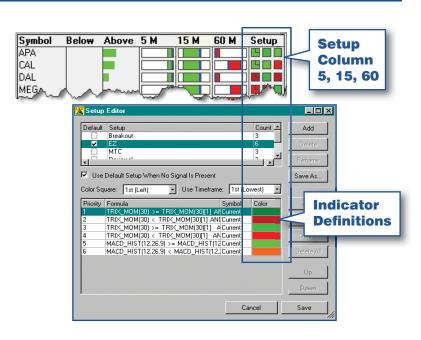

(Continued from page 5)

Another powerful M.T.C. feature that was added for VisualTrader 7 is the **Setups Column**. If you have used OmniTrader 2010, you already know how powerful the feature is. Essentially, you can define columns in ANY timeframe that show a colored square.

The colors in the square are programmable—you can make them anything you want. Typically, you would set strong Buy Setups as solid

green and strong Sell Setups as solid red, with shades in between.

We provide an "EZ Setup" selection that does a very good job of showing bullishness and bearishness using a variety of technical indicators, but this feature is totally configurable. If you have an indicator setup you like, you can add it and SEE IT in your list—in multiple timeframes!

### More VisualTrader 7 Features:

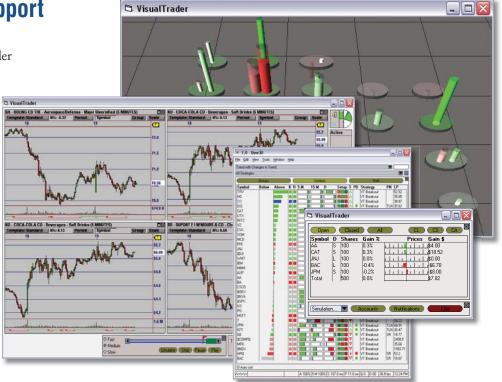

#### **Enhanced Multiple Window Support**

For VisualTrader 7, we have added enhanced multiwindow support. The following elements of VisualTrader can be assigned to different windows, <u>and placed</u> <u>on separate monitors</u>:

- · The Map
- · The List
- · Charts and Layouts
- · The Positions Window

This improvement makes VisualTrader infinitely more configurable! You can reduce the size of your Map, make the Positions Windows large enough to accommodate all your positions, and widen the list to show a large number of rows and every possible column.

With VisualTrader 7, you can display the market YOUR Way.

#### **Trade Sector ETFs in VisualTrader 7!**

With VisualTrader 7, it's now easier than ever before to make money trading Sector ETFs. Why? Because you can see the consensus of the stocks WITHIN the ETF in VisualTrader!

The goal is to use a map that has the highest-weighted stocks in each ETF in the ETF "plate". We provide Sector ETF Maps with the program, so you can trade these unique and powerful securities right away.

#### **Special Bonus for GroupTrader Owners!**

You can also now easily create your own ETF or Group Maps by importing profiles directly into VisualTrader 7. This means you can easily keep your ETF or Group Maps updated or customize the profiles in GroupTrader and then import them.

If you don't own GroupTrader or ETF Trader, you can acquire them with your VisualTrader 7 upgrade—call Nirvana Sales at 800-880-0338.

VisualTrader 7 comes with pre-defined ETF Maps. You can also directly import Maps from ETF Trader and GroupTrader into VisualTrader 7.

# <u>Prove the Power of VisualTrader 7 to yourself</u> in minutes with the VisualTrader Trading Simulator!

# Making Money with VisualTrader 7

With Multiple Timeframe Confirmation, you are going to have the benefit of seeing INSIDE the market from any timeframe you are trading, and understand where other players are buying and selling. The power of this one concept is well worth the upgrade.

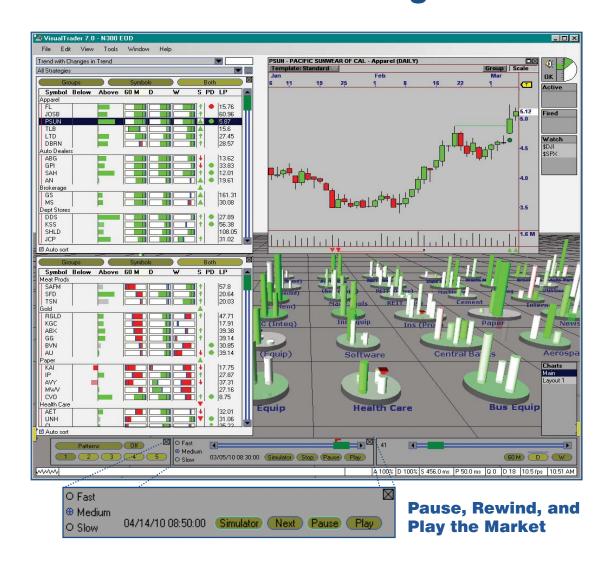

The OTHER features of VisualTrader combine with MTC to provide a trading experience that is heads and shoulders above anything else on the market.

Only VisualTrader 7 has these powerful features:

- MTC in the List
- Trading Signals
- Chart Patterns
- Color Charts
- Leading Indicator (main)
- Group Consensus Signals
- Indicator Setups

MTC is the clearly the most powerful of these tools, but the others provide important additional information.

The question is, "How do you use these tools to make a profit?" The answer: "Training and Practice!" When you think about it, the most powerful feature of VisualTrader 7 is not MTC, Signals, or Patterns. It's the Trading Simulator!

#### **Visualize Profits!**

Trading is like anything that requires skill—it takes practice to master the Art. The Trading Simulator in VisualTrader provides this benefit, because you can "roll back the clock" and trade forward in time, using all the features of VisualTrader to analyze your trading decisions.

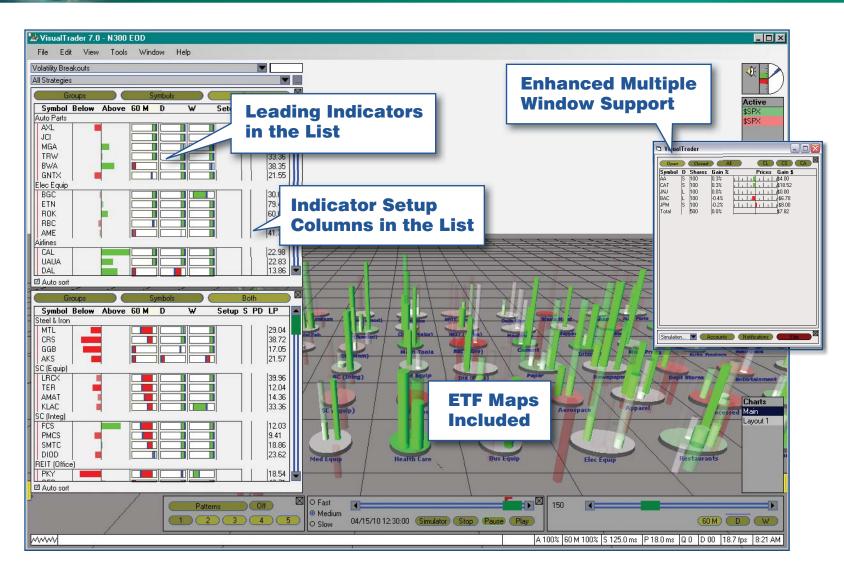

Then, you can place and manage your trades with the embedded Visual Brokerage and Trade Plan feature. In just 15 or 20 minutes in the simulator, you can gain the experience of trading for weeks with the program, without risking a dime! With VisualTrader 7, I am including my new *Making Money with VisualTrader* seminar. In the seminar, my team and I will show you how you how to use MTC in conjunction with the other tools to engage the markets.
