Enhanced *Dynamic* Strategies are now included with OmniTrader 2011!

Greetings!

If you received our recent mailer, I am sure you could sense my excitement about OmniTrader 2011. The improvements that were made to this version were VERY significant from a technical analysis perspective. **And, they have enabled us to create <u>more profitable Strategies</u> in OmniTrader 2011.**

When we focused on using the new tools in OmniTrader 2011, we improved virtually ALL of OmniTrader's "base" Strategies, including Reversal, Breakout and Trending – <u>improving accuracy and DOUBLING performance</u>!

> **"Improved accuracy and DOUBLE the profit per trade"**

We just started including these new Strategies with every OmniTrader 2011 package that goes out the door. What better way to showcase the power of this incredible upgrade?

Seeing is Believing!

In the course of developing these Strategies, we set up a new Profile on the S&P 100 and activated OmniTrader's base Strategies. The performance of these Strategies is good:

Base Strategies	Trades	Hit Rate	Profit per Trade
Breakout (Stocks)	367	64%	0.7%
Trending (Stocks)	360	66%	1.4%
Reversal (Stocks)	610	56%	1.4%
RT Reversal (Stocks)	3469	56%	0.1%

Then, we activated the NEW DYNAMIC STRATEGIES:

> **Higher accuracy and more than DOUBLE the Profit per Trade!**

NEW Strategies	Trades	Hit Rate	Profit per Trade
Breakout (Stocks) DO	303	**65%**	1.4%
Trending (Stocks) DO	143	**71%**	2.6%
Reversal (Stocks) DWC	152	**72%**	**3.3%**
RT Reversal (Stocks) HTC	2013	**66%**	**0.3%**

Isn't that amazing? By using the new Dynamic features of OmniTrader 2011, we were able to dramatically improve profitability, while maintaining or improving accuracy with a substantial number of trades to prospect from.

NirvanaSystems

Included FREE with OmniTrader 2011

These new Strategies are now INCLUDED FREE with OmniTrader 2011. The improvements in profitability are significant, and we want all our OmniTrader users to experience the incredible power that this software has to offer.

With these new Strategies, our customers do not have to experiment with OmniTrader to discover these gems on their own. Just fire up the software and see the performance increase for yourself.

You may be wondering, "How do these performance statistics translate to opportunities in the market?" I just ran OmniTrader on the new Strategies, and I'd like to show you just a few of the incredible Signals I am seeing.
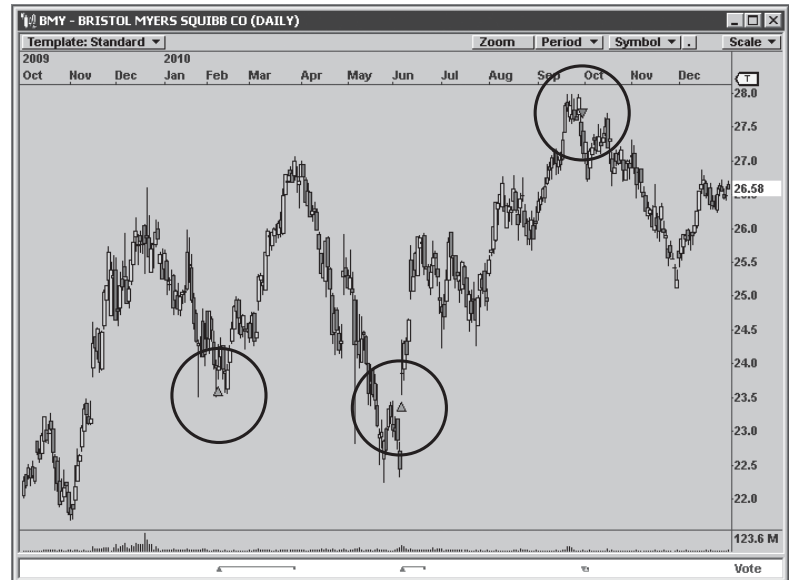

Reversal (Stocks) DWC

The first is on BMY, with several Signals from the Reversal (Stocks) Dynamic Weekly Confirmation (DWC) Strategy. By confirming Signals with the Weekly Chart, this Strategy tends to cherry-pick the wide reversal points, as seen in this example.
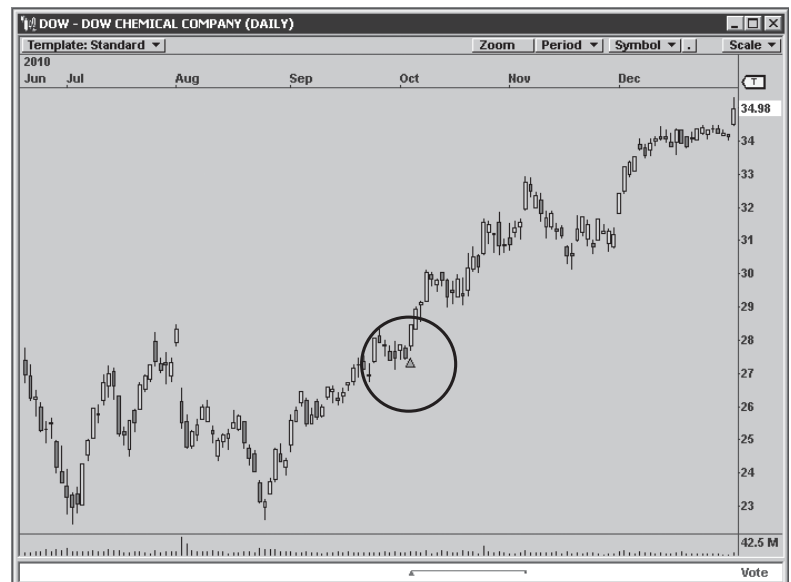

Trending (Stocks) DO

The next one is on symbol DOW from the Trending (Stocks) with Dynamic Optimization Strategy. This particular Strategy optimizes specific factors, using OmniTrader's new Dynamic Optimization feature.

Even with optimization, the new Strategies generate Signals that NEVER CHANGE. This was one of the big innovations in the dynamic features of OmniTrader 2011.

Recent Signal Examples

Signals on BMY from the Reversal (Stocks) DWC Strategy. This Strategy does a great job of finding wide Reversal Signals.

Here we see a Signal that was generated on DOW by the Trending (Stocks) DO Strategy – the ideal point to enter a Trend Following trade in this chart.

Breakout (Stocks) DO

We also include an improved version of Breakout, called Breakout (Stocks) with Dynamic Optimization, or Breakout (Stocks) DO.

This Strategy attempts to find sudden breaks in the market in a new direction. Powered by Dynamic Optimization, it does a fabulous job of identifying strong Breakouts, as you can see in the chart to the right for MA.
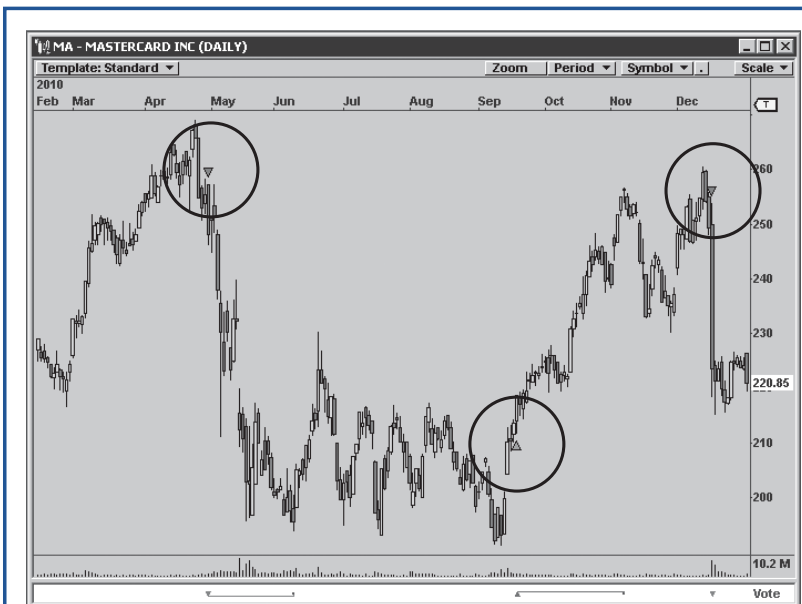

REAL TIME, too!

We are very excited about the impact that Dynamic Timeframe Confirmation is having on our Real Time Strategies. With the OmniTrader 2011 package, we are including a Dynamic version of our base RT Reversal Strategy, which is capable of generating Signals like this one on AA (right).

We have just begun to scratch the surface in terms of the power of the new Dynamic Tools in OmniTrader 2011.
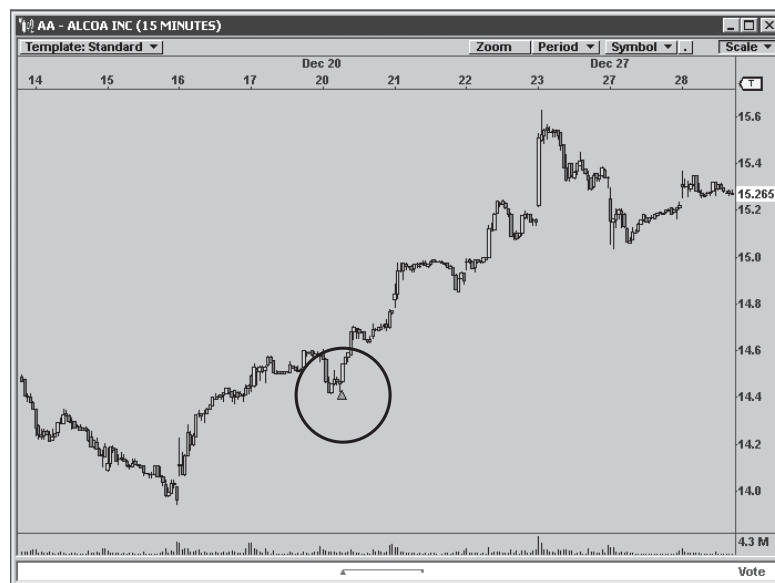

PLUS, a Powerful New Way to Manage Exits

Signals on MA from the Breakout (Stocks) DO Strategy. The Strategy tends to find the most powerful Breakouts.

Real Time (15 Minutes) on AA from RT Reversal (Stocks) HTC.

The Signals generated by the new Dynamic Strategies are going to dramatically enhance your ability to find and trade powerful moves in both End-of-Day and Real Time with OmniTrader 2011, which leads to the next important topic for trading the market – managing exits.

There are many great ways to manage your trades in OmniTrader, including Trailing Profit Stops, Pivot Stops, and more. And of course, Trade Plans make it easy to tie the different methods together. In conjunction with OmniTrader 2011, we came up with a new DYNAMIC trade management method called The Dynamic Profit Module.

Why the Dynamic Profit Module is so powerful. And, so easy to use!

The Dynamic Profit Module uses advanced Cycle Analysis to identify the inherent cycles in the market. It also uses projection techniques, such as Fibonacci Retracements, to identify optimal price movement to reach a profit target (and also, a corresponding stop loss).

Activate DPM in your charts and instantly, you are shown the most likely profit excursion point. You are also shown the point in time that the specific value is likely to be hit, as shown in the example to the right for MA.

There are many other uses for the DPM, including an easy way to determine Cycle Highs and Lows for optimal entries. Plus, DPM Exits can be used in Trade Plans, which means you can automate them in Strategies.
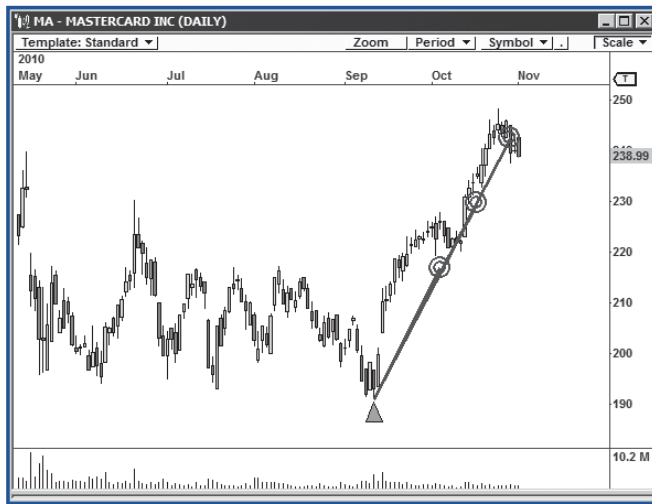

Deadline Extended!

We knew the new Dynamic features of OmniTrader were good, but frankly, the results we are seeing from the new Dynamic Strategies exceeded even our expectations!

As we release these new Dynamic Strategies, we have decided to extend the deadline for OmniTrader 2011 and the Special Package pricing to January 21.

Special Pricing Extended through 1/21/11

OmniTrader 2011 Upgrade .... just **$149!** (reg. $199)
includes the New Dynamic Strategies

OmniTrader 2011 Upgrade Package .... just **$395!** (reg. $943)
includes the New Dynamic Strategies, the Dynamic Profit Module,
AND The Power to Trade with Confidence seminar

You will quickly see why I say, "This is the OmniTrader I originally envisioned!" And of course, OmniTrader 2011 comes with a Money Back Guarantee. 2011 is going to be an awesome year in the market, and January is the perfect time to get your skills honed to tackle it. Try the new OmniTrader 2011 - you'll be glad you did.

Sincerely,

Ed Downs
